Tissues that express PPHKP-5 (as a fraction of total tissues expressing PPHKP-5) include reproductive (0.288). gastrointestinal (0.212) and haematopoietic or immune (0.192). Diseases or conditions associated with tissues expressing PPHKP-5 (as a fraction of total tissues expressing PPHKP-5) include cancer (0.577), inflammation or trauma (0.327) and cell proliferation (0.308). The encoded protein shows homology to rat kinase. The invention provides human PPHKP-1 to -11 polypeptides (see AAB20322-32) and polynucleotides (see AAF30476-86). It also provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for diagnosing, treating or preventing disorders associated with expression of PPHKP, including gastrointestinal disorders associated with expression of PPHKP, including gastrointestinal disorders associated with expression of PPHKP, including gastrointestinal

Additionally, polynucleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays. The protein kinase polypeptides may be used as antigens in the production of antibodies against the protein kinases and in assays to identify modulators of
                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 358 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAU03501-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides encoding protein kinases and the polypeptides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                            protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding human kinase polypeptides, useful diagnosing and/or treating e.g. cancer, immune, cardiovas neuronal-associated diseases, and microbial infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; protein kinase; PTK; STK; cancer; cardiovascular disease; metabolic disorder; immune related disease; neurological disorder; neurodegenerative disorder; inflammatory disorder; infectious dise

                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemotheric activity, haemostatic activity, nativity, capacity and the property of the activity, capacity and the property of the activity, capacity and the property and activity, haemostatic and theorem.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity such as: Immune system suppression, Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, architits and inflammation, leukaemias and contact of the sequence data for this patent did not form
                                                                                                                                        cerebroprotective; hepatotropic; cytostatic; immunosuppressive; antirheumatic; ophthalmological; noctropic; antiparkinsonian; antirconvulsant; hypotensive; antiarteriosclerotic; haemostatic; antiaconvulsant; hypotensive; antiarteriosclerotic; haemostatic; antialcoholic; virucide; HIV; cardiac disease; immunological di

Controlling cell-death by administering positive or negative regulator of cell-death inhibitory-factor, for treating cancer, AIDS, autoimmune diseases, Crohn's diseases, glaucoma, Alzheimer disease.

Claim 1; SEQ ID NO 3; 35pp; Japanese.

comprising administering a positive or negative regulator of cell-death inhibitory-factor. The invention also comprises a method for screening modulators of cell-death, by contacting cells expressing cell-death inhibitory factor with a candidate compound, monitoring level of expression of cell-death inhibitory factor, evaluating cell-death modulation ability of the compound based on change in the level of expression of the factor and selecting compounds having cell-death modulation ability. The cell death regulator of the invention may have cardiant, neuroprotective, anti-HIV, antiinflammatory, cerebroprotective, hepatotropic, cytostatic, immunosuppressive, anti-heumatic, ophthalmological, nootropic, antiparkinsonia, anticonvulsant, hypotensive, antiarteriosclerotic, haemostatic, antialcoholic and hypotensive, activities. The method of the invention is useful for treating virucide activities. The method of the invention is useful for treating HIV, cardiac diseases, immunological diseases, neurodegenerative disease, ischaemic damage and congestion, discorder of central nervous system, technological contral nervous system, hepatic disorder, acute pancreatic inflammation, and cancer, AIDS, autoimmune diseases, rheumatism, Crohn's disease, glaucoma, Alzheimer's disease, Parkinson's disease, Huntington's disease, hypertension, arteriosclerosis of the particular damage mycografial infractions of the particular damage. disease, Parkinson's disease, Huntington's disease, hypertension, arteriosclerosis, reperfusion damage, myocardial infarction, cerebral trauma, cerebral infarction, cerebral haemorrhage, hepatitis, alcoholic invention relates to a novel method for controlling cell-death cell death and cerebral ischemia. inhibitory protein The present sequence represents the Of. the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                       CC also known as stress kinase inhibitor protein (SKIP-1) polypeptide. The CC htrb polypeptide is useful for inhibiting an AP-1 mediated inflammatory CC signal in a cell. The polypeptide employed in the method is preferably CC htrb-1, htrb-1 N htrb-1 C, htrb-1 N C, htrb-3 N htrb-3 V ntrb-3 C, or htrb CC -3 N C. It is also useful for providing htrb agonist activity for CC activating an ERK-mediated signal e.g. AP-1-mediated gene activation consists activation of signal, an estrogen receptor-mediated gene activation signal, an estrogen receptor-mediated gene activation signal, an cC fibroblast growth factor (FGF) induced signal, or a pMA induced signal, considered gene activation signal, an cC inflammatory signal in a cell such as tumor necrosis factor (TNF) induced inflammatory signal, or an interleukin induced inflammatory signal, or an interleukin induced inflammatory signal, or an interleukin induced inflammatory signal. htrb cc proteins are useful in screening assays, predictive medicine and in CC therapeutics or prophylactics. The htrb proteins are useful for screening compounds e.g. for treating and/or preventing diseases caused by abnormal CC thrb activity, such as rheumatoid arthritis, diabetes, psoriasis, contended the htrb therapeutics are useful for antagonizing interleukin-1 dependent contended to the htrb therapeutics are useful for antagonizing interleukin-1 dependent white the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins are useful for antagonizing interleukin-1 dependent contended to the proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antirheumatic; antiarthritic; antidiabetic; antipsoriatic; osteopathic; opthalamological; cardiant; cytostatic; haemostatic; immunosuppressive; antiinflammatory; estrogen receptor; fibroblast growth factor; FGF; tumour necrosis factor; TNF; htrb-3.

The present sequence represents a partial polypeptide which has kinase activity. The kinase polynucleotides can be used to express the polypeptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypeptides and fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinase play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins

The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a human PKIN-10 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       comprising administering a positive or negative regulator of cell-death inhibitory-factor. The invention also comprises a method for screening modulators of cell-death, by contacting cells expressing cell-death inhibitory factor with a candidate compound, monitoring level of expression of cell-death inhibitory factor, evaluating cell-death modulation ability of the compound based on change in the level of expression of the factor and selecting compounds having cell-death modulation ability. The cell death regulator of the invention may have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Controlling cell-death by administering positive or negative regulator cell-death inhibitory-factor, for treating cancer, AIDS, autoimmune diseases, Crohn's diseases, glaucoma, Alzheimer disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HIV, cardiac diseases, immunological diseases, neurodegenerative disease, ischaemic damage and congestion, dissorder of central nervous system, hepatic disorder, acute pancreatic inflammation, and cancer, AIDS, autoimmune diseases, rheumatism, Crohn's diseases, glaucoma, Alzheimer's disease, Parkinson's disease, Huntington's disease, hypertension, arteriosclerosis, reperfusion damage, myocardial infarction, cerebral trauma, cerebral infarction, cerebral hemorrhage, hepatitis, alcoholic hepatitis, and cerebral ischemia. The present sequence represents the rat cell death inhibitory protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N-PSDB; ADC59336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      JP2003063986-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ophthalmological, nootropic, antiparkinsonia, anticonvulsant, hypotensive, antiarteriosclerotic, haemostatic, antialcoholic and virucide activities. The method of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cardiant, neuroprotective, anti-HIV, antiinflammatory, cerebroprotective, hepatotropic, cytostatic, immunosuppressive, antirheumatic,
